PROGRAMMER / ANALYST IN LAWRENCE, KS

GITHUB <https://github.com/Nutritarian1> |

LINKEDIN <https://www.linkedin.com/in/claudia-bullock-176635163>

In the near future, I plan to retire from my current position at CMS, in order to return to a career in computer programming. Although it has been quite a few years since I've worked as a programmer, it is the type of work that I have always enjoyed the most, and which I am most ideally suited for

WORK EXPERIENCE

Health Insurance Specialist, Centers for Medicare and Medicaid Services (CMS), KC, MO, Aug. 2006– Present

- I currently serve as a Contracting Officer's Representative (COR) for the Division of Quality Improvement (DQI). In this role I manage Quality Innovation Network contracts, whose purpose is to improve the quality of care for Medicare beneficiaries.

Information Technology Specialist, KC, MO, Jul 2000– Aug 2006

- In January of 2005, I joined the Division of Quality Improvement (DQI), in order to accept a promotion to grade 13, which involved taking over the duties and responsibilities of a retiring colleague. This work primarily consisted of the execution of COBOL programs in an IBM Mainframe environment. In addition to the various projects that were transitioned to me from my predecessor, I also continued to provide SAS programming support for studies which I co-authored, and which were published in peer-reviewed journals.
- In July of 2000 I was re-assignment back to the job I held from 9/1/1996 through 06/2000. My continuing role was to provide SAS programming support and technical assistance for various studies of health outcomes, in order to facilitate recommendations on what should be done to improve health care delivery to medicare beneficiaries. In addition, because of my appropriate data processing background and experience, I was asked to familiarize myself with some critical processes that needed to be maintained and executed for the Division of Quality Improvement, as the technical expert responsible for those processes was planning to retire. I worked one on one with this technical expert, familiarized myself with the relevant processes, and successfully executed them when there was an actual business need to do so. This work primarily consisted of the execution of COBOL programs in an IBM Mainframe environment.

EDUCATION

LaunchCode, LC101 Programming Course — 2018 **University of Maryland**, B.A. Philosophy — 1981 / B.S. Computer and Information Science

RECENT PROJECT EXPERIENCE

BLOGZ —

Blogz

A school project completed in LC101, it allows users to signup, create, and read blog posts.

- Python, Flask, SQLAlchemy, Jinja, MySQL, and HTML
- Beyond the assigned tasks, I also completed multiple 'bonus missions', and refined the time-stamp to displaying in the user's local time zone.
